Preface	5
1 Background Material	9
1.1 Algebraic tools	9
1.1.1 Commutative algebra	9
1.1.2 Gröbner bases: a quick introduction	19
1.1.3 Groups	31
1.1.4 Sheaf theory	33
1.2 Analytical tools	42
1.2.1 Topological linear spaces	42
1.2.2 Distributions	47
1.2.3 Fourier transform and fundamental solutions	59
1.2.4 The division problem for distributions	68
1.3 Elements of hyperfunction theory	73
1.3.1 Hyperfunctions in one variable	73
1.3.2 Cohomological properties of the sheaf of holomorphic functions	87
1.3.3 Hyperfunctions of several variables	91
1.3.4 Fourier transform of hyperfunctions	97
1.4 Appendix: category theory	100
2 Computational Algebraic Analysis for Systems of Linear Constant Coefficients Differential Equations	103
2.1 A primer of algebraic analysis	103

4	Contents	
2.2	The Ehrenpreis-Palamodov fundamental principle	120
2.3	The fundamental principle for infinite order differential operators on hyperfunctions	131
2.4	Using computational algebra software: a chapter in experimental mathematics	134
3	The Cauchy-Fueter System and its Variations	143
3.1	Regular functions of one quaternionic variable	143
3.2	Quaternionic hyperfunctions in one variable	149
3.3	Early quaternionic analysis and its impact on the theory of several complex variables	162
3.4	Several quaternionic variables: an analytic approach	165
3.5	Several quaternionic variables: an algebraic approach	172
3.6	The Moisil-Theodorescu system	197
4	Special First Order Systems in Clifford Analysis	209
4.1	Introduction to Clifford algebras	209
4.1.1	The standard Clifford algebras	209
4.1.2	Endomorphisms and spinor spaces	217
4.1.3	Classifications of real Clifford algebras	221
4.2	Introduction to Clifford analysis	225
4.2.1	Dirac operators	225
4.2.2	Radial algebra	229
4.2.3	Fischer decomposition	230
4.3	The Dirac complex for three operators	233
4.4	Special systems in Clifford analysis	243
4.4.1	General systems	243
4.4.2	Systems using the Witt basis	247
4.4.3	Experiments with combinatorial systems	256
5	Some First order linear operators in physics	265
5.1	Physics and algebra of Maxwell and Proca fields	268
5.2	Variations on Maxwell system in the space of biquaternions	276
5.3	Results on \mathcal{D}_Z -regular functions.	282
5.4	The Dirac Equation and the linearization problem	291
5.5	Octonionic Dirac equation	294
6	Open problems and avenues for further research	305
6.1	The Cauchy–Fueter system	305
6.2	The Dirac system	306
6.3	Miscellanea	307
	References	309
	Index	321
